Zanesville Endovascular Surgery

We specialize in minimally invasive ways to treat vascular disease (i.e., no incisions). We use this approach for:

- AAA repair
- kidney artery narrowing
- dissolve clots with catheters
- many vein problems

Many of our techniques involve the following products and procedures:

- Gore Excluder
- Cook Zenith
- VNUS
- TRIVEX
- SEPS
- vnus stilet

Abdominal Aortic Aneurysm (AAA)

Thank you for participating in our aneurysm screening today. Please read the accompanying pamphlets for further information. Do you know that 10-15 % of male smokers between the ages of 65 and 75 have an abdominal aortic aneurysm?

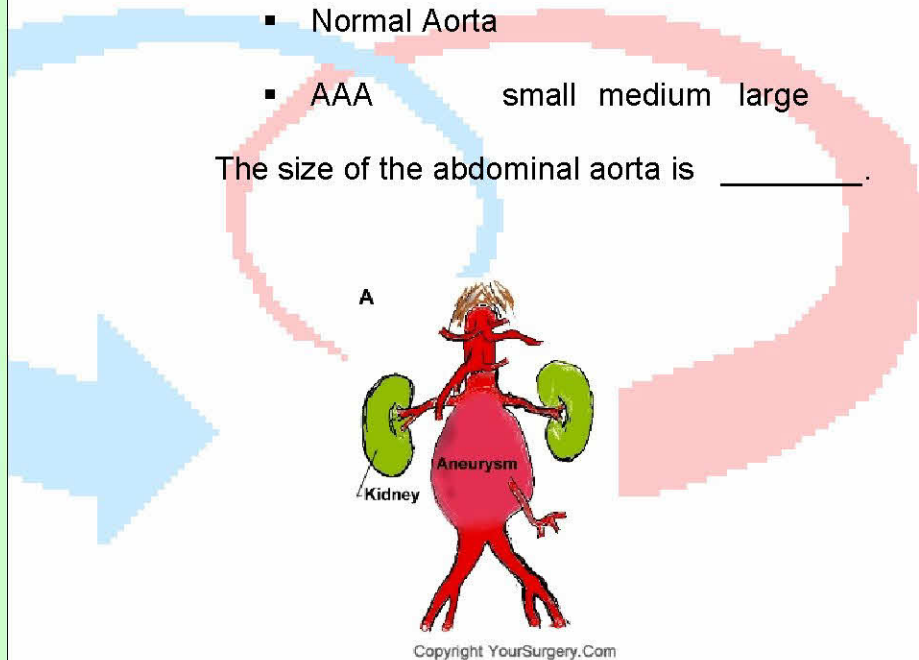

Your ultrasound today shows

- Non diagnostic study

- Normal Aorta

- AAA small medium large

The size of the abdominal aorta is _____.

If your ultrasound reveals the presence of AAA, you should show this report to your physician. The study today is a screening only, and this study and several other diagnostic tests can be done in much more detail.

This study today is only a portion of an aortic ultrasound. It is only a very rough estimate and does not substitute for a thorough medically diagnostic ultrasound. We, therefore, are not medically liable for these findings today.
